# THE ELIZABETH NURSERY CO.

ELIZABETH, N. J.

Office: 96 BROAD ST.,

Telephone, ELIZABETH, 1251.

*Cut showing only range of houses put up last year.*

## GUARANTEE.

While we exercise the greatest care to have all trees, shrubs and plants sold by us true to name and free from disease, and hold ourselves prepared to replace, on proper proof, all that may prove to be otherwise, we do not give any warranty, expressed or implied, with respect to them; any and all such goods are sold upon the express condition and understanding that in case any of them prove to be untrue to name, unhealthy or otherwise defective, we shall not be held responsible for a greater amount than the original price of the goods.

All claims for errors or deductions must be made immediately upon receipt of goods.

We cannot fill long lists for one or two of a kind at hundred rates, will charge at single rates; 5 of a kind at rate of 10; 25 of a kind at rate of 100; and 250 of a kind at rate of 1000.

## TERMS.

Prices quoted are for nurserymen, florists and dealers only. **Cash from unknown parties or satisfactory reference.** A small charge will be made for packing, merely to cover the actual expense. No charge will be made for delivery to railroad or express office.

Parties will do well to order early, as stock will be scarce later in the season. **Samples** will be sent and charged for at hundred rates. Those desiring samples will please send the money, including postage.

## REFERENCES.

For those who do not know us we refer to any of the leading nurserymen in the United States and to the First National Bank of Elizabeth.

### CERTIFICATE.

NEW JERSEY STATE BOARD OF AGRICULTURE.

Office of the State Entomologist,

NEW BRUNSWICK, N. J., Oct. 12th, 1898.

This is to certify that I have, this 11th day of October, 1898, examined the nursery stock growing on The Elizabeth Nursery Co.'s nurseries at Elizabeth, N. J., and have found the small fruits, shade and ornamentals apparently free from San José scale or other dangerously injurious insect pests; also that the stock examined was in an apparently healthy condition.

JOHN B. SMITH, State Entomologist.

## Clematis Paniculata.

One of the most hardy and valuable of all the small flowering varieties. Of very rapid growth, with large shining green foliage and a great profusion of beautiful and delightfully fragrant flowers, which are borne in large panicles. Very choice, perfectly hardy, and finely adapted for covering a trellis or fence.

## STANDARD SHRUBS.

As the demand has increased for standard shrubs, we are growing some fine specimens. A very pleasing effect can be produced in formal planting by using standard shrubs. A collection of *Althæas*, of the different varieties, will prove more satisfactory, we believe, than the Tree Rose, being equally attractive when in bloom.

The height given is for the stem only, measuring from the ground to the lowest branch.

	Each	10	100

## ROSES.

We are making the culture of Roses one of our specialties; we are growing over 500,000 plants, selecting such varieties as we think will give the best satisfaction. Most of our Roses are grown on their own roots, however, we propose to have a good stock of budded plants for those who prefer them. Write for special prices on large quantities.

Hybrid Perpetuals and other field-grown Roses, general selection, all strong 2-year plants on own roots and 1-year budded.

Varieties marked with \* on own roots, those marked with † budded.

15 cts. each; \$1.25 per 10; \$10.00 per 100, except where noted.

**MANETTI STOCKS are higher than they have been. We offer first-class stocks, No. 1, at \$1.50 per 100; \$10.00 per 1000.**

# HARDY HERBACEOUS PLANTS.

EULALIA GRACILLIMA.

## EULALIA gracillima.

4 to 5 feet.

This is the most useful as well as the most beautiful of all the grasses, and is entirely hardy, which will recommend it strongly to those who desire to grow so ornamental a plant in their gardens. Its leaves are very narrow and dark green, with silver-white mid-rib; and whether used upon lawns or in combination with other plants in the garden, is one of the most decorative in its effects. We can recommend it as one of the best among the newer introductions.

5 cts. each; 40 cts. for 10;

\$3.00 per 100.

## PRICE OF POT-GROWN STRAWBERRY PLANTS

40 per cent. less than quoted in this list.

### NEW VARIETIES.

We have selected what we believe to be a number of choice varieties of Strawberries, most of these varieties have been tested in different parts of the country, and nearly all of the descriptions we give are from the different originators.

**Nick Ohmer.** This is one of the most promising of the new varieties. The plant is large and stocky and is probably not surpassed in healthy vigorous growth and great productiveness by any other variety. Fruit is of the largest size, dark glossy red, firm and of excellent quality. Perfect blossom. One of the best authorities in this country says of it: "If restricted to a single variety it would be my first choice without a moment's hesitation." \$1.00 per doz.; \$4.50 per 100.

**Star.** The berry is large and handsome in appearance, measuring 6 to 7 inches in circumference, on the average. It is as near perfection in shape as possible, somewhat resembling the Gandy, but not quite so dark in color. It is a beautiful glossy crimson, coloring all over at the same time, being an ideal berry in this respect. All the berries average large from first to last. In quality it is of the best. All who have tested it pronounce it the best they have ever eaten. It matures all its berries in a dry season, possessing the greatest drought-resisting qualities of any berry we are acquainted with. The plant is a vigorous and strong grower; season of ripening is second early. 75 cts. per doz.; \$4.00 per 100.

**Excelsior.** This is undoubtedly a marked advance in extra early berries, and not only is it one of the very earliest to ripen, but it is firmer and more prolific than any other very early sort. It is also large and of good quality and is a very valuable variety either in the home garden or for market. 75 cts. per doz.; \$4.00 per 100.

**Jersey Market.** "The Jersey Market originated in New Jersey and has been fully tested. In a general way it is an improved Chas. Downing, resembling that old reliable and favorite variety in appearance, but is larger, firmer in texture and with large abundant clean foliage that has never been affected by rust or scald. The berries are bright crimson in color and of large but not of mammoth size, being remarkably uniform in both size and color. They are above the average in firmness, of rich delicious quality and ripen in midseason. Plant of exceptionally strong healthy habit and a heavy, reliable yielder, under all conditions; blossom pistillate; one that everybody can depend upon and not be disappointed. Offered last season for the first time."

The above is the Introducer's description. 75 cts. per doz.; \$4.00 per 100.

**McKinley.** "This variety has been thoroughly tested and we consider it a superior Strawberry, being remarkable for its size, shape, color, and quality. Berry large, roundish, inclining to conical but sometimes flattened or coxcombed; color crimson, flesh firm, and quality very good. The plant is vigorous, healthy, and a great yielder; flowers bi-sexual or perfect. Season medium to late. We can confidently recommend it for garden and market culture."—Introducer's description. 75 cts. per doz.; \$4.00 per 100.

**Brunette.** This variety, in its combination of delicious flavor and beauty, has probably taken a step in advance of any variety now generally cultivated. Its berries are above medium size, round and almost invariably perfect; of a dark mahogany color when fully ripe, and without any white tip. The plant is a strong grower and as free from rust as any variety now cultivated; flower perfect. The fruit is quite round in form, very handsome, and remarkable for its exquisite flavor. \$1.00 per doz.; \$4.00 per 100.

## NEW PEDIGREE STRAWBERRIES.

The following varieties are as described by the originators and the *Rural New Yorker*. We have chosen to develop a bright clean coloring in our berries with distinct deep set seeds without green tips and with large green calyx and the result has been most pleasing. In uniformly large size, regularity of shape, and firmness, our berries are ahead of all others.

In quality some of the list are better than others, but none are surpassed by any of the market berries of the present time. Most of our efforts have been directed toward developing very late varieties, and what we now offer run from late to very late, with but one exception, and that, as you will note, is a midseason to late variety.

We wish to impress on your mind that we are offering you something which has been fully tested on low, high, light, heavy, and poor ground, and you need not hesitate one moment to buy, but can purchase with full confidence and our assurance that they will surpass anything you have ever fruited before.

**Joe.** This variety was obtained after crossing three times. The first two varieties used were Middlefield and Chairs; we got a seedling that resembled the Middlefield in quality and form, which had always attracted us to this variety, also showed the size of the Chairs, both of these varieties being productive, this seedling was exceptionally so, and it was found advisable to get a cross that would increase the vigor of the plants, and this was done by crossing with Sharpless, which had the desired effect. Fruit large to very large and continues large to the end of the season; firm; quality good; season late.

**Carrie Silvers.** This variety was sent to the *Rural New Yorker* as Carrie, under which name they tested it. Their being another Carrie Strawberry and fearing confusion, we changed it by adding Silvers.

This variety was the result of crossing with Sharpless a seedling of Warfield fertilized by Parker Earle.

Plant and foliage strong, vigorous, and healthy; flower imperfect; enormously productive; berry large, bright red, good quality and firm. A long lived, vigorous variety of considerable merit. It begins to ripen early in June and continues until June 27; an extremely productive variety.

**Stella.** A seedling of Bubach and Sharpless was crossed with Gandy. All of these varieties are exceptionally large berries, but Stella surpasses them all in this respect and combines with size the exceptional vigor and health of the plant of Sharpless, productiveness of Bubach, and firmness of Gandy.

Plants exceedingly robust and healthy; flower imperfect; enormously productive; berries very large, bright red, fine quality and very firm. Ripens late.

The *Rural New Yorker* says of this variety: "Imperfect flower, vigorous; berries from large to the largest size, varying from round to broadly heart-shaped and irregular; scarlet color, red flesh, firm, of mild quality."

Report of July 16, 1898, says: "Stella was at its best June 17. It is unusually productive. Scarlet color, firm, red flesh of mild quality."

**Reba.** A seedling of Bubach and Chas. Downing crossed by Gandy. The size and immense productiveness of this berry will particularly please the market gardener and the color and quality is all that could be desired for home use.

Plant vigorous, hardy, and long-lived. One of the most productive varieties that we have ever fruited; flower imperfect; fruit large to very large, bright red, good quality, firm. Midseason to late.

The *Rural New Yorker* of July 17, 1897, says of it: "Imperfect flower; vines of unusual vigor, round shape, red flesh, and of good quality."

Also of July 16, 1898, says: "Vines continue to be vigorous and productive. This season it has been one of our most productive varieties."

**Robbie.** This variety was produced by crossing with Gandy a seedling of Shuster's Gem and Kentucky. Shuster's Gem, being a seedling of Crescent and Sharpless, combined the cardinal virtues of these varieties in strong robust plants, berries of great beauty, large size, and wonderful productiveness, and for these reasons it was selected and all through its seedlings of both crosses it shows these points of merit.

Robbie is a strong plant, exceedingly vigorous, healthy, and productive. Berries large, round, bright red, firm, and of exceptionally fine quality. Ripens very late.

*Rural New Yorker* of July 17, 1897, says: "Perfect flowers; vines of unusual vigor and productiveness; berries well held up on strong, tall peduncles. The largest berries in our collection; pink flesh, splendid quality. We have rarely seen such large berries so well held up. As now judged, it is the most valuable late berry we have ever raised. June 21: Still bearing many berries of medium to large size and good quality."

**Nettie.** A seedling of Bubach and Yale was crossed with Sharpless. The best of these seedlings were again crossed with Gandy and among them was found the Nettie,

## NEW PEDIGREE STRAWBERRIES—Continued.

the largest strawberry that we have ever fruited, it combines with this valuable quality, the productiveness of Bubach, and the vigor of plant so prominent in Sharpless.

Plant and foliage exceptionally strong, vigorous, and healthy; flower imperfect; enormously productive; berries very large, bright red, exquisite quality. Ripens very late.

The *Rural New Yorker* of July 16, 1898, says: "The flower is pistillate; we regard this as one of the most promising berries we have ever tried. The berries range from largest, and are of goodly form, heart-shape, and the seeds deeply imbedded. Each peduncle bears 10 or more berries of quite uniform size, ripening not until June 20. They are moderately firm and of that kind of acidity that makes them of high quality when sugar is used.

## STANDARD VARIETIES.

**Henry.** The berries are very large; color dark crimson and the quality is excellent. Perfect blossom. In season, it begins to ripen with the earliest and continues in bearing to the last. 75 cts. per doz.; \$3.50 per 100.

**Ridgeway.** Berry large to very large. Color bright glossy crimson, with golden seed; quality as good as the best. 75 cts. per doz.; \$3.50 per 100.

**Wm. Belt.** The berries are as large as Bubach, more perfect in shape, just as productive and the color is perfect. 75 cts. per doz.; \$4.00 per 100.

**The Clyde.** Is as large as Bubach, nearly or quite a week earlier and very much firmer. It is a strong staminate. The plant is very vigorous and healthy. Season early. 75 cts. per doz.; \$3.50 per 100.

**Magoon.** The berries are a beautiful rich crimson color and are very large under proper cultivation. The plant is very productive; quality is first-class, season medium. 75 cts. per doz.; \$3.50 per 100.

**Glen Mary.** A superb variety which unites large size, great productiveness and good quality; bright, glossy crimson, and fine in flavor. The plant is strong and healthy, very prolific. 75 cts. per doz.; \$3.50 per 100.

**Marshall.** A superb variety, especially desirable for its large size and fine flavor; dark crimson when fully ripe, handsome and good. Its excellent quality, fine flavor and large size render it admirable for table use. Midseason. 75 cts. per doz.; \$3.50 per 100.

**Brandywine.** The berries are large, roundish-conical, regular, and uniform, bright glossy crimson, very handsome, firm, and solid, excellent in quality, with fine aromatic flavor. Plant remarkably vigorous and productive. Midseason to late. 75 cts. per doz.; \$3.50 per 100.

**Timbrell.** The disseminator says of it: "Its combined extreme hardiness, healthiness, and productiveness, with fine color, lateness of ripening, excellent quality, and productiveness, will make it valuable." \$3.50 per 100.

Price for the following: Dozen, 50 cts.; 100, \$3.00.

*Not less than six or fifty of a variety at dozen or hundred rates.*

**Beder Wood.** This is one of the very best early berries. The fruit is large, conical, bright red color and of excellent quality.

**Bubach No. 5.** (P.) This is a wonderful berry in vigor of plant and yield of fruit even under careless culture. Midseason.

**Lovett's Early.** Among its good points are adaptability to all soils and localities, its firmness, productiveness, color, and quality. It ripens midseason.

**Gandy.** One of the best late strawberries. In size and firmness it is all that can be desired. The berries are large, very uniform in size and shape, of bright crimson color, handsome and showy, very firm and of good quality.

**Parker Earle.** The fruit is of good size, long, conical, with slight neck, very bright red, quality good, with a rich, mild flavor. The plants are healthy and vigorous. Season late.

**Saunders.** A Canadian berry of great value for the market grower. It is deep red, and remarkably glossy. The flesh is of the same color and has a sprightly, agreeable flavor.
